

In the Abstract:

Please amend the abstract as follows:

A web server and an associated online database are disclosed that allow a user to update an entry in the database. The web server may be configured to receive a request from a user to update an entry in an on-line database; verify the authority of the user to update the entry; display a page containing an entry to be updated; allow a user to update the description of a user-defined category for the entry; and store the description of the user-defined category in the on-line database. A web page accessible by search engines is disclosed. In a preferred embodiment, a web page is provided having a URL and includes information desired to be displayed on the web. The web page further includes keywords associated with the web page. The keywords are accessible to remote search engines and facilitate the location and display of the web page for remote search engines.
